

see the light

See the light is more than just a catch phrase at IRIS Digital Video Systems, it's something we do very well.

Our digital video systems feature ATM environmental light monitoring. They also utilize patented industry leading transactional image capture technology for remote retrieval by multiple users simultaneously.

In addition, our IRIS Teller and Tower Cameras have advanced optics and the Total Light Control option for pixel-by-pixel lighting adjustments.

Speak to your IRIS representative to determine the IRIS Digital Video System that best fits your needs. Ask about our new I.P. systems too.

At IRIS Digital Video Systems we always see the light and soon we'll have you seeing the light too, one image at a time.
